

Please don't get lost in all of the details.

Right now, we need to set up our AJAX APIs correctly.

Remember, I am building our course project in these steps:

1. **Task 1:** Define our server-side routes ==> DONE.
2. **Task 2:** Set up our AJAX APIs ==> **THIS SECTION.**
3. **Task 3:** Complete our final frontend ==> LATER.

In order to define our AJAX APIs, I will be building a simple HTML page with four buttons. But as I said before, this will not be our final course project HTML page. It is here to help us test our AJAX calls.

Got it?

Let's get crackin'!
