

This section was very important.

You have now done the following:

1. Set up your server-side code (previous section).
2. Defined your AJAX APIs using the traditional XHR object.
3. Defined your own module.
4. Fixed CORS-related issues.

In theory, I could stop here, and we could complete our Doggy Daycare application by coding up the final HTML, CSS, and JavaScript files.

Hold your horses!

Before I finish, I want to show you how you can also define your AJAX APIs using the modern Fetch API and a third-party library, Axios.

Let's get into it.
