

NEXT STEPS

We have set up our Node server on *port 3000*

What is the next step?

I want us to set up our SERVER URLs

NEXT STEPS

GET	→	http://127.0.0.1:3000/api/dog
POST	→	^s http://127.0.0.1:3000/api/dog
^T PUT	→	^s http://127.0.0.1:3000/api/dog
DELETE	→	^{s:id} ^{s:id} http://127.0.0.1:3000/api/dog

These server URLs are called **routes**

Let's create a **separate server file** that defines all of these routes
